"I am here! Find me with " Search Me""

Slave Unit

Model SMS-01

Water resistance at 40m depth

Master Unit

Standard Model
Model SMM-01

Drop alarm Model
Model SMM-03

Weather proof model

Success of castaway search at wide area of the sea relies on how we can use of the item in effective.

By injuries or hypothermia from drifting accident, probability of survival will turn low as time passes.

Survival rate improvement is decided by how searching time is shortened.

Searching ability of "search me" is overwhelming it of human capability.

Covering large area
Available to use in the sky or ships

Searching for plural slave units at a time
Improving effectively

Greatly shorten the search time
scan omplete in 6 sec. chance to be rescue

Searching limit, 1km - 5km line of sight

Available in use at mountain area

Free from comm. fee

※ 5 atmwater-proof
Transmitting starts over sea surface .

Example of delivery record Japan Air Self-Defense Force

Difference between SEACH-ME and eye sight performance

	Possible time period of search	Possible distance of search	Climate/ Wave height
Eyesight	Mostly in sunshine time	Visibility area	Impossible in bad weather Invisible in wave height is high Any climates
searchme	24 hours	Line of sight, 1-5 km	Any climates

Ref. Price | Master unit: JPY29,800.- Size:H107xW64XD13(mm) weight: below 77g
Slave unit: JPY29,800.- Size:H72.5xW41XD15.6(mm) weight: below 46g

※SEARCH-ME=POWERED BY HITOCOCO

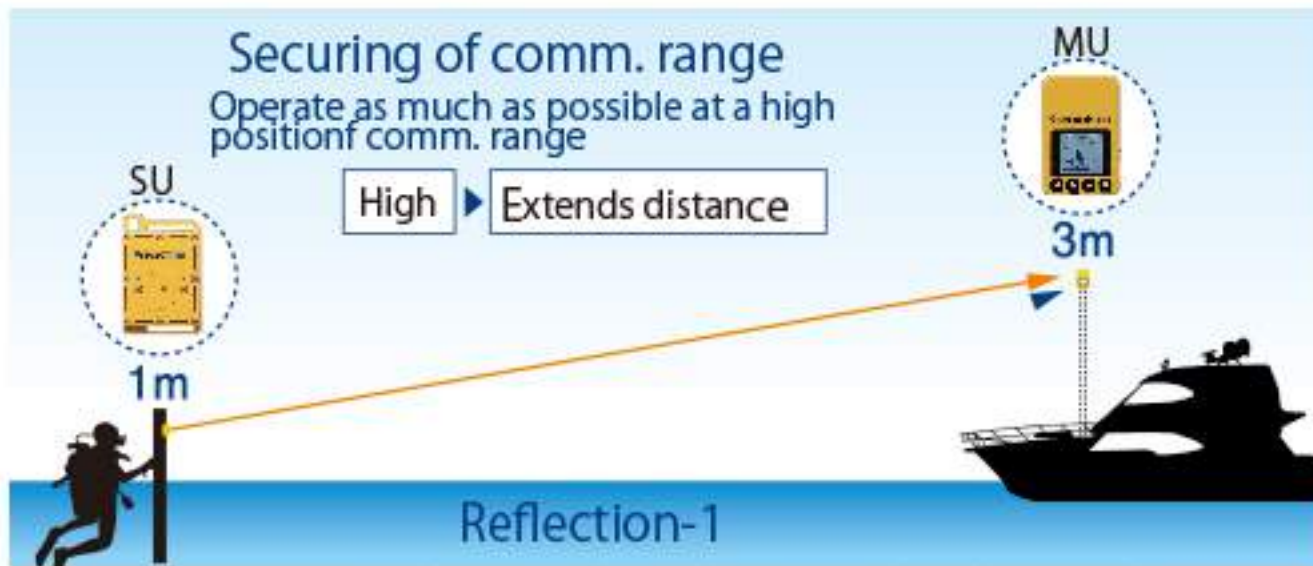

How to use Search-Me

- 1 Push the search button after inputting the ID number of slave or master to be searched.
- 2 After about six seconds, direction and distance of slave unit to be searched shows on the display of the master unit.
- 3 Continue to search according to the direction shown on the display of master unit by pushing search button.

Radio wave does not go in underwater.

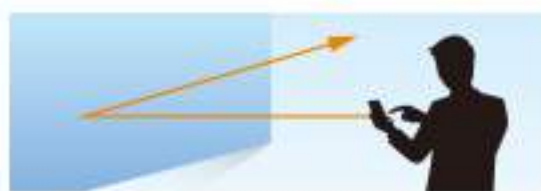

Abbreviation: SU (Slave unit), MU(Master unit), Rx (Receiving)

Keep the unit on the surface of the water, and hold the position as high as possible. Searcher can look for the unit efficiently in a wide area, which are hold at high position. For keeping the position, using diving float or tool pole for taking self-photograph is effective method.

Position of SU	Position of MU	Distance	Limit of Rx
1 m	3m	1,000m	1,700m
10cm		300m	550m
1 cm		100m	180m

Radio wave cannot go through obstacles such as walls.

Radio wave comes after reflection because radio wave cannot go through obstacles such as walls..

Effective search

Because of characteristics and feature radio wave which cannot go through obstacles, keep going ahead to the direction shown on the display of master unit, and finally find the slave unit.

- Master unit can search for other master units mutually.
- Master unit can register the 20 ID number of slave unit. Multiple master units can search for single slave unit. Plural main unit can look for a slave unit or master unit.
※Using plural master unit which are divided by area enables much effectively.
